Diet	A place where a person or animal lives.

2. Read the text and complete the following table.

Common name: Bengal Tiger
Scientific name: *Panthera Tigris Tigris*
Type: Mammals
Diet: Carnivorous
Average life span in the wild: 8 to 10 years
Size: Head and body, 5 to 6 feet; tail, 2 to 3 feet
Weight: 240 to 500 lbs.

The Bengal tiger, also known as the Royal Bengal Tiger or the Indian tiger, is the subspecies with the largest population. It is the national animal of India, place where its image is part of the traditions and the culture. It is a mammal with thick legs, strong teeth and jaws and coat with the characteristic coloration pattern. Bengal tiger habitats usually are tropical rainforests, marshes, and tall grasses.

Bengal tigers can ingest up to 40 kilograms of food on a single occasion but they can't follow prey for long distances. The tiger is carnivore; they prefer monkeys, buffalo and deer. When hunting, they can reach speeds of up 65 km/h. They can see up to six meters at night. Its tail can be up to one meter long. They can swivel their ears like a radar dish to focus on sound signals. Its roar can be heard as far as three kilometers away.
