

LISTENING ACTIVITY
TYPES OF ECOSYSTEMS

Name: _____ **Date:** _____

Professor: Claudia Camila Coronado Rodríguez

Purpose: Through the video “types of ecosystems” students will know about ecosystems and their characteristics.

Content aim: Students will be able to identify and compare the different ecosystems.

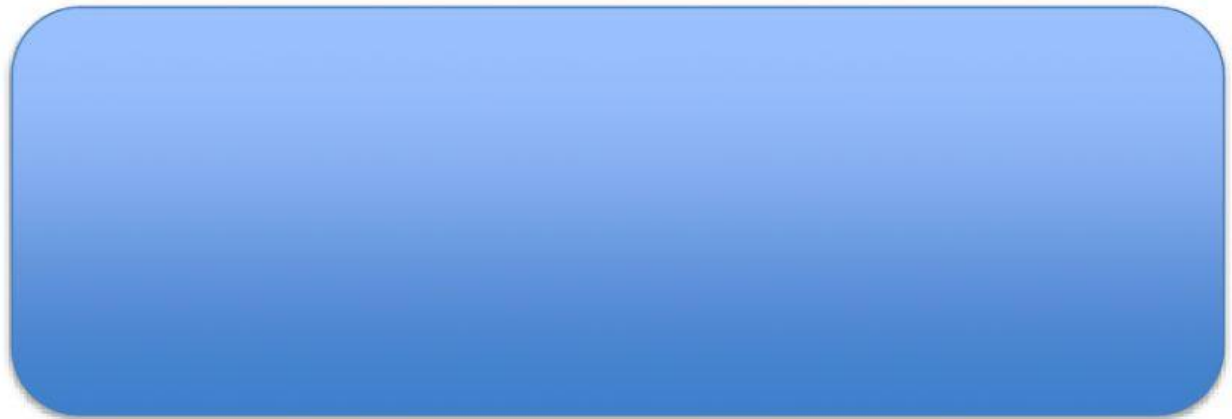

Language aim: Students will be able to describe ecosystems and their characteristics.

Group: Environmental engineering.

Level IV

LISTENING (30 minutes)

Watch the video “Ecosystems”

Based on the video, select true (T) or false (F) in the following statements

Ecosystems is a community of living organisms along with their natural habitat	T	F
Ecosystem could be a pond	T	F
Some believe that our Earth is not an ecosystem	T	F
Ecosystems include three components	T	F
Abiotic components are the organisms living of the system	T	F
Biotic components are the no-living elements of the system	T	F
Ecosystems need a specific size	T	F
Each organism needs living in an ecosystem has a role or niche	T	F
Every organism needs to have the same niche or too long	T	F
Human beings are not ecosystems	T	F

Taking into account the information given in the video, complete the picture classifying elements and living beings into the abiotic and biotic components.

Write the elements, you can see an example in the abiotic component.
