

จงเขียนจำนวนต่อไปนี้ในรูปเศษเกิน

ตัวอย่าง $1\frac{3}{5} = \frac{(1 \times 5) + 3}{5} = \frac{5 + 3}{5} = \frac{8}{5}$

1) $3\frac{2}{3} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

2) $2\frac{1}{2} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

3) $2\frac{3}{5} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

4) $2\frac{5}{6} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

5) $1\frac{3}{7} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

6) $2\frac{4}{9} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

7) $2\frac{5}{11} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$

8) $3\frac{5}{9} = \frac{(\quad \times \quad) + \quad}{\quad} = \frac{\quad + \quad}{\quad} = \frac{\quad}{\quad}$
