

1. Namakan bentuk poligon (TP1)

| Poligon |                                                                                   |    |                                                                                     |
|---------|-----------------------------------------------------------------------------------|----|-------------------------------------------------------------------------------------|
|         |  | as |    |
|         |                                                                                   | as |  |
| Nama    | <input type="text"/>                                                              |    | <input type="text"/>                                                                |
|         |  | as |    |
|         |                                                                                   | as |  |
|         | <input type="text"/>                                                              |    | <input type="text"/>                                                                |

2. Nyatakan nilai sudut (TP1)

|                                                                                     |                                                                                      |                                                                                       |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
|  |   |  |
| Sudut x = <input type="text"/> °                                                    | Sudut x = <input type="text"/> °                                                     | Sudut x = <input type="text"/> °                                                      |
|  |  |                                                                                       |
| Sudut x = <input type="text"/> °                                                    | Sudut x = <input type="text"/> °                                                     |                                                                                       |
