Hyperloop

Los Angeles and San Francisco are cities in the state of California, in the U.S. They are about 650 kilometers apart. Millions of people travel between these cities every year. Today, the fastest way to travel between them is by airplane. It is about one hour. However, a new idea could make this trip shorter.

The Hyperloop is a kind of train. It could make the 650-kilometer trip in only thirty minutes. It could go 1,100 kilometers per hour, which is faster than an airplane. It would carry passengers in cars called pods. Pods would use magnets and low air pressure to float and move through tubes. This is how the Hyperloop would be able to go 650 kilometers in only thirty minutes.

The Hyperloop is still just an idea. It's the idea of an inventor named Elon Musk. It would cost billions of dollars, but it would save many people a lot of time.

City Animals

Alaska is the largest state in the U.S. Almost 300,000 people live in the city of Anchorage, in southern Alaska. It is a very unique place. One special thing about Anchorage is that moose live in the city. Between 250 to 1,000 moose live in the city at different times of the year.

The reason moose live in Anchorage is because they feel comfortable there. In the wild, bears try to kill and eat moose. But in the city, there is plenty of food to eat. Bears, moose, and other animals get food from dumpsters. In the winter, they can go into people's yards and eat branches from the trees. In the summer, they can eat plants from people's gardens.

Most people don't mind having moose in the city. Although some moose cause small problems, these animals make the city special. The people of Anchorage have even made the moose a symbol of the city.
