

## HABITAT DESTRUCTION

- 1. In order for a species to survive, its habitat must have:**
  - A. Territory
  - B. Necessary food
  - C. Water
  - D. All of these
  
- 2. Habitat destruction is when:**
  - A. The organisms that previously used the site are displaced or destroyed.
  - B. Predators killed other animals.
  - C. Animals destroy their own habitat.
  
- 3. Deforestation, desertification, urbanization, and pollution are causing:**
  - A. Habitat destruction
  - B. An increase in biodiversity
  - C. Hibernation of wild animals
  
- 4. Human activities are responsible for the loss of around \_\_\_\_\_ of the forests.**
  - A. 25 %
  - B. 50 %
  - C. 18 %
  
- 5. Gorillas, tigers, and lions are examples of:**
  - A. Endangered animals who are losing their habitat.
  - B. Endangered animals who are increasing their number.
  - C. Animals that are extinct.
  
- 6. Red Sandalwood and Kulavetti are:**
  - A. Trees that are at risk of becoming extinct.
  - B. Trees that only grow in the desert.
  - C. Trees that we don't need.
  
- 7. Destruction of marine habitats has impacts on:**
  - A. The desert's biodiversity.
  - B. The ocean's biodiversity.
  - C. The migration of wild animals.
