

ASTEROIDS AND COMETS

Remember...

An asteroid and a comet are differentiated for their composition, but at first glance, they can be differentiated for their shape, the comets have a tail of light and the asteroids are similar to a rock.

Activity:

- 1.) Look at the picture and choose if it's a comet or it's a rock.

- 2.) Select in the sentence the correct answer.

- A (an) / is made of ice, dust and rocky material.
- A (an) / is made of metals and rocky material.
