

Name \_\_\_\_\_ Date \_\_\_\_\_

We need living things to survive. We eat food that comes from living things. We might live in a home made of the wood from trees. And our clothes are often made from plant fibers. Can you think of other ways we rely on living things?

Across

- 3 A living thing that makes its own food.
- 5 The path of food from one living thing to another. (Two words)
- 8 A diagram that shows that the amount of usable energy in an ecosystem is less for each higher animal in the food chain. (Two words)
- 9 An animal that eats both plants and other animals.

Down

- 1 A living thing that breaks down dead organisms for food.
- 4 A living thing that eats other living things as food.
- 5 A model that shows how food chains overlap. (Two words)
- 6 An animal that eats plants.
- 7 An animal that eats other animals.
