

Para cambiar de L a Cl o a Ml
Hay que seguir la misma norma siempre:

Sigue los ejemplos:

$$\times 12 \text{ L} = 12 \times 100 = 1.200 \text{ CL}$$

$$\times 3 \text{ CL} = 3 \times 10 = 30 \text{ ML}$$

$$\times 5 \text{ L} = 5 \times 1000 = 5.000 \text{ ML}$$

AHORA TÚ:

$$\times 1 \text{ L} = \underline{\hspace{2cm}} \text{ ml}$$

$$\times 3 \text{ CL} = \underline{\hspace{2cm}} \text{ ml}$$

$$\times 40 \text{ L} = \underline{\hspace{2cm}} \text{ cl}$$

$$\times 200 \text{ CL} = \underline{\hspace{2cm}} \text{ ml}$$

$$\times 34 \text{ L} = \underline{\hspace{2cm}} \text{ cl} = \underline{\hspace{2cm}} \text{ ml}$$

$$\times 240 \text{ L} = \underline{\hspace{2cm}} \text{ cl} = \underline{\hspace{2cm}} \text{ ml}$$
