

Other environmental problems

How do they affect us?

What is the problem?

The over population in the world has given place to different changes in our lives. Some areas as technology, health, food industry and transportation improve their products every day which brings other problems

- There is too much garbage and fewer places to recycle it.
- There are too many landfills near the city and they cause too much contamination.
- There is less clean water, because many resources are polluted.
- There are fewer programs to monitor factories and their level of contamination in the city.
- There are too many chemicals in our food.
- There is too much petroleum in the water and that contaminates the ocean wild life.

too much and too many describe a positive or negative idea
the word fewer is used with count / non-count nouns
The word less is used with count / non-count nouns

What is the problem?
