### Odd and Even Numbers

An **even** number of counters can be grouped into sets of two with none left over. Even numbers end in 0, 2, 4, 6 or 8.

16 is even

When an **odd** number of counters are grouped into sets of two, there is always one left over.

17 is odd

Odd numbers end in 1, 3, 5, 7 and 9.

To tell whether a number is odd or even always use the number in the ones place. 3, 14**2** even because of the 2
