ACID RAIN

When water is polluted by chemicals it is known as "Acid Rain".
See if you can label the flow chart below correctly.

Science - ACSHE062 - Science knowledge helps people to understand the effect of their actions.

LearnFromPlay | LearnFromPlay.com

Harmful gases are released into the air	When the clouds are full and it rains the acid particles return to Earth as rain or snow.
The acid rain has harmful effects on the soil, forests, streams and lakes and everything that lives in them.	When harmful gasses reach the clouds they covert into acid particles which may be transported over large distances.
