COMPREHENSION

Read the passage carefully then <u>answer each questions using a complete sentence</u>.

Our environment is our surroundings which made up of all the things that are natural or man-made. We are surrounded by living and non-living things which are part of our environment. Plants and animals are living things in our environment. Plants have leaves, stems and roots while animals are made up body parts that help them to move around in their environment. They all need food, water and air to live.

A living thing can move by itself, reproduce and grow bigger. Even though non-living things exist and are part of our environment, they cannot and do not need to survive. Non-living things are like computers, rocks and sand. They do not respond to change, move or reproduce. They can exist anywhere.

1. What does the term '**environment**' mean?

2. According to the passage, identify **two ways** in which things in our environment are grouped.

3. What does the term **'living things'** mean?
