Escribe los números que faltan para que las operaciones sean correctas.

$$\frac{7}{\boxed{\text{pink}}} \div \frac{1}{3} = \frac{\boxed{\text{pink}}}{9}$$

$$\frac{4}{6} + \frac{2}{\boxed{\text{orange}}} = \frac{32 + \boxed{\text{orange}}}{48} = \frac{\boxed{\text{orange}}}{48}$$

$$\frac{\boxed{\text{cyan}}}{8} - \frac{\boxed{\text{cyan}}}{9} = \frac{27 - 16}{72} = \frac{\boxed{\text{cyan}}}{72}$$

$$\left(\frac{\boxed{\text{green}}}{9}\right)\left(\frac{5}{\boxed{\text{green}}}\right) = \frac{30}{81}$$

$$\frac{4}{5} \div \frac{1}{2} = \frac{\boxed{\text{yellow}}}{\boxed{\text{yellow}}}$$

$$\frac{1}{7} + \frac{2}{\boxed{\text{purple}}} = \frac{8 + 14}{\boxed{\text{purple}}} = \frac{22}{\boxed{\text{purple}}}$$

$$\frac{4}{6} - \frac{5}{9} = \frac{\boxed{\text{green}}}{\boxed{\text{green}}} - \frac{\boxed{\text{green}}}{\boxed{\text{green}}} = \frac{\boxed{\text{green}}}{\boxed{\text{green}}}$$

$$\left(\frac{5}{10}\right)\left(\frac{3}{7}\right) = \frac{\boxed{\text{red}}}{\boxed{\text{red}}}$$

Simplifica las fracciones a su mínima expresión

$$\frac{44}{48} = \frac{\boxed{\text{red}}}{\boxed{\text{red}}}$$

$$\frac{6}{54} = \frac{\boxed{\text{cyan}}}{\boxed{\text{cyan}}}$$

$$\frac{15}{72} = \frac{\boxed{\text{yellow}}}{\boxed{\text{yellow}}}$$

$$\frac{30}{81} = \frac{\boxed{\text{pink}}}{\boxed{\text{pink}}}$$

$$\frac{22}{56} = \frac{\boxed{\text{green}}}{\boxed{\text{green}}}$$

$$\frac{15}{70} = \frac{\boxed{\text{purple}}}{\boxed{\text{purple}}}$$
