Escribe los números que faltan para que las operaciones sean correctas.

$$\frac{7}{\textcolor{magenta}{7}} \div \frac{1}{3} = \frac{\textcolor{magenta}{7}}{9}$$

$$\frac{4}{6} + \frac{2}{\textcolor{orange}{6}} = \frac{32}{48} + \frac{\textcolor{orange}{2}}{48} = \frac{\textcolor{orange}{30}}{48}$$

$$\frac{\textcolor{cyan}{7}}{8} - \frac{1}{9} = \frac{27}{72} - \frac{16}{72} = \frac{\textcolor{cyan}{11}}{72}$$

$$\left(\frac{5}{\textcolor{green}{9}}\right) \left(\frac{5}{\textcolor{green}{9}}\right) = \frac{30}{81}$$

$$\frac{4}{5} \div \frac{1}{2} = \frac{\textcolor{yellow}{8}}{5}$$

$$\frac{1}{7} + \frac{2}{\textcolor{purple}{7}} = \frac{8}{\textcolor{purple}{7}} + \frac{14}{\textcolor{purple}{7}} = \frac{22}{\textcolor{purple}{7}}$$

$$\frac{4}{6} - \frac{5}{9} = \frac{\textcolor{green}{12} - \textcolor{green}{10}}{\textcolor{green}{18}} = \frac{2}{\textcolor{green}{18}}$$

$$\left(\frac{5}{10}\right) \left(\frac{3}{7}\right) = \frac{\textcolor{red}{15}}{\textcolor{red}{70}}$$

Simplifica las fracciones a su mínima expresión

$$\frac{44}{48} = \frac{\textcolor{red}{11}}{\textcolor{red}{12}}$$

$$\frac{6}{54} = \frac{\textcolor{cyan}{1}}{\textcolor{cyan}{9}}$$

$$\frac{15}{72} = \frac{\textcolor{yellow}{5}}{\textcolor{yellow}{24}}$$

$$\frac{30}{81} = \frac{\textcolor{magenta}{10}}{\textcolor{magenta}{27}}$$

$$\frac{22}{56} = \frac{\textcolor{green}{11}}{\textcolor{green}{28}}$$

$$\frac{15}{70} = \frac{\textcolor{purple}{3}}{\textcolor{purple}{14}}$$
