

Practice

Class 5 investigated germination. They put seeds on damp cotton wool and placed them into plastic bags. They then put the plastic bags in different places. They checked the seeds after three days. This is a bar chart of their results.

3 In which place did the most seeds germinate?

4 How many seeds germinated in the freezer?

5 Suggest a reason why the same number of seeds germinated on the desk drawer and on the top of the desk.
