

## Activity 6

Theory

Mariam has created two different algorithms for the happy and sad faces program. She needs your help to compare the algorithms. She needs to know which is best.

Draw circles on the algorithms to find the similarities and differences.

Algorithm 1	Algorithm 2
 <pre> graph TD     A[Draw Happy] --&gt; B[wait 1000 milliseconds]     B --&gt; C[Draw Sad]     C --&gt; D[wait 1000 milliseconds]           </pre>	 <pre> graph TD     A[wait 2000 milliseconds] --&gt; B[Set Grid]     B --&gt; C[wait 2000 milliseconds]     C --&gt; D[Set Grid]           </pre>

Which algorithm works better and why?
