

$\frac{1}{2} \ell = 0.5 \ell = 500 \text{ ml}$	$\frac{1}{8} \ell = 0.125 \ell = 125 \text{ ml}$
$\frac{1}{4} \ell = 0.25 \ell = 250 \text{ ml}$	$\frac{3}{8} \ell = 0.375 \ell = 375 \text{ ml}$
$\frac{3}{4} \ell = 0.75 \ell = 750 \text{ ml}$	$\frac{5}{8} \ell = 0.625 \ell = 625 \text{ ml}$
$\frac{1}{5} \ell = 0.2 \ell = 200 \text{ ml}$	$\frac{7}{8} \ell = 0.875 \ell = 875 \text{ ml}$
$\frac{2}{5} \ell = 0.4 \ell = 400 \text{ ml}$	$\frac{1}{10} \ell = 0.1 \ell = 100 \text{ ml}$
$\frac{3}{5} \ell = 0.6 \ell = 600 \text{ ml}$	$\frac{3}{10} \ell = 0.3 \ell = 300 \text{ ml}$
$\frac{4}{5} \ell = 0.8 \ell = 800 \text{ ml}$	$\frac{7}{10} \ell = 0.7 \ell = 700 \text{ ml}$
1 liter = 1000 milliliter 1 ℓ = 1000 ml	$\frac{9}{10} \ell = 0.9 \ell = 900 \text{ ml}$

Adiga Aalia Noor

Calculate. Give your answer in litre.

- a $3.8 \ell + 9.204 \ell = \square \ell$ b $2\frac{3}{4} \ell + 7.265 \ell = \square \ell$
- c $10.46 \ell + 578 \text{ ml} = \square \text{ ml}$ d $\frac{9}{10} \ell + 12\,304 \text{ ml} = \square \ell$
- e $3\frac{1}{5} \ell + 680 \text{ ml} + 0.2 \ell = \square \ell$ f $8 \ell\,645 \text{ ml} + 12\frac{1}{2} \ell + 4.1 \ell = \square \ell$
