

## Year 4 Mathematics-Term 1 Week 6 Lesson 1

LO: To recall division facts.

To divide by 6, we divide the number into 6 equal groups and look at how many are in one group.

$$12 \div 6 =$$

Divide 12 into 6 equal groups.

Count how many there are in one group.

$$12 \div 6 = \underline{\quad}$$

Complete the calculation.

①  $30 \div 5 = \underline{\quad}$       ②  $54 \div 6 = \underline{\quad}$       ③  $72 \div 6 = \underline{\quad}$

④  $42 \div 6 = \underline{\quad}$       ⑤  $5 \div 5 = \underline{\quad}$

Find the missing number in the calculation.

⑥  $\underline{\quad} \div 7 = 11$       ⑦  $\underline{\quad} \div 4 = 3$       ⑧  $\underline{\quad} \div 6 = 10$

⑨  $\underline{\quad} \div 2 = 8$

Challenge: I have 18 seeds.  
I plant 6 seeds in each pot.  
How many pots do I need?

To divide by 7, we divide the number into 7 equal groups and look at how many are in one group.

$$14 \div 7 =$$

Divide 14 into 7 equal groups.

Count how many there are in one group.

$$14 \div 7 = \underline{\quad}$$

Complete the calculation.

①  $35 \div 7 = \underline{\quad}$       ②  $63 \div 7 = \underline{\quad}$       ③  $84 \div 7 = \underline{\quad}$

④  $49 \div 7 = \underline{\quad}$       ⑤  $7 \div 7 = \underline{\quad}$

Find the missing number in the calculation.

⑥  $\underline{\quad} \div 4 = 11$       ⑦  $\underline{\quad} \div 5 = 3$       ⑧  $\underline{\quad} \div 7 = 10$

⑨  $\underline{\quad} \div 7 = 8$

Challenge: There are some rocks at the beach.  
Each rock has 7 starfish attached to it.  
There are 35 starfish in total. How many rocks are there?
