THE FIVE SENSES

SIGHT

Light enters your **eyes** and forms an upside-down image.

The **optic nerve** sends information to the brain.

TOUCH

When you touch something, **sensory nerves** in your **skin** sends information to the brain.

HEARING

When **sound waves** enter your **ears**, the liquid inside the **cochlea** moves and sends information to the brain.

SMELL

Air enters your **nose** through the **nostrils** when you breathe in.

The **olfactory nerves** sends the information to the brain.

TASTE

Your **tongue** is covered in **taste buds** which detect different tastes.

They send information about the taste to the brain.
