

FOOD CHAINS

One of the most important between living things in an ecosystem involves

Every organism needs energy

All food chains begin with energy from

ENERGY

THE SUN

RELATIONSHIPS

TO LIVE

1

The Sun

they eat **primary consumers**

2

Producers

gives energy to all living things

3

Consumers

obtain their energy by **eating other** living things

4

Primary consumers

use energy from the Sun to make their own food through the **photosynthesis**

5

Secondary consumers

they eat **producers**

6

Decomposers

live on the **remains** of other living things
