

# FOOD CHAINS

## 1. Complete the text about food chains.

A food chain shows the movement of energy through an ecosystem.

### PRODUCERS

Plants use the energy from the Sun to produce their own food through photosynthesis.

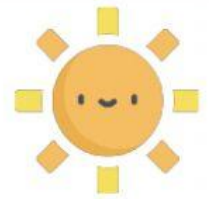

### CONSUMERS

Plants are eaten by animals such as rabbits. They are primary consumers because they are the first animals in the food chain.

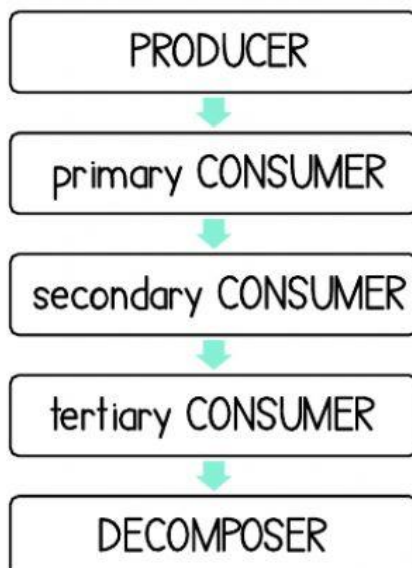

Secondary consumers, such as foxes, are predators that eat other

### DECOMPOSERS

The final level is decomposers, such as fungi and bacteria. They feed on the remains of other living things after their death.

## 2. Complete this desert food chain.

BEETLE

FUNGI

CACTI

SCORPION

FENNEC FOX
