

Look at the following table and fill in the blanks :

Plant name	Structural adaptation	How do they help the plant to survive ?
Mangrove trees:		help them to withstand the waves.
Water lily (Lotus flower)		
<u>Palm trees</u>		Both types of adaptation can help the palm trees withstand strong and severe winds.
Pine trees	The branches are short and triangular in shape and have needles instead of leaves	
Prickly pears		These spines prevent the animals from eating them.
Umbrella acacia
