

Look at the following table and fill in the blanks :

Plant name	Structural adaptation	How do they help the plant to survive ?
<b>Mangrove trees:</b>		help them to withstand the waves.
<b>Water lily (Lotus flower)</b>		
<b>Palm trees</b>		Both types of adaptation can help the palm trees withstand strong and severe winds.
<b>Pine trees</b>	The branches are short and triangular in shape and have needles instead of leaves	
<b>Prickly pears</b>		These spines prevent the animals from eating them.
<b>Umbrella acacia</b>
