## Thermal Energy (Energía Termal)

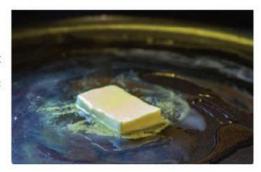

The temperatura of a material depends on how much **thermal energy** it has. A high temperature it means more thermal energy.

Materials change state when thermal energy increases or decreases.

When the temperature in a liquid increases it becomes a \_\_\_\_\_\_. This process is called \_\_\_\_\_\_.

 If the thermal energy in solids increases, it becomes a \_\_\_\_\_\_. This process is called \_\_\_\_\_\_.

 If the thermal energy in a liquid decreases, it becomes a \_\_\_\_\_\_. This process is called \_\_\_\_\_\_.
