<u>Triangles Quiz</u>

Draw a line to match the triangle name to its description/definition.

Isosceles Triangle   has one 90 degrees angle

Right Triangle   has three equal sides

Equilateral Triangle   has one angle that is more than 90 degrees
                                               and less than 180 degrees
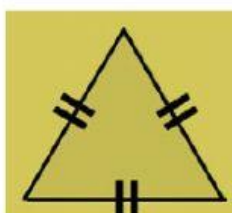

Obtuse Triangle   has three angles less than 90 degrees

Scalene Triangle   has two equal sides

Acute Triangle   has no equal sides

Identify the triangle. Write the name of the triangle under each picture. Use the information above to guide you.

Use your protractor to draw the following triangles (by angle). You will do this in your notebook and submit a picture of it on the platform.

1. Draw a triangle with a 65 degrees angle.

2. Draw a triangle with a 120 degrees angle.

3. Draw a triangle with a 90 degrees angle.
