

MAGNETS

WHAT MAGNETS DO?

LET'S READ

A magnet can **attract**, or pull, some objects.

A magnet will only attract objects made of iron or nickel. Magnets can attract objects through solids, liquids and gases.

The pull of a magnet gets weaker as it gets farther from an object.

There are some objects magnets can not attract. Plastic, wood, and some metals can not be pulled by a magnet.

DRAG AND DROP THE IMAGES ACCORDING TO THEIR CATEGORY.

OBJECTS	ATTRACT	DOES NOT ATTRACT
Crayon 		
Screw 		
Eraser 		
Lock 		

WRITE TRUE OR FALSE

Magnets pull objects with iron in them

☐

Magnets can pull plastic

☐
