

Solve the problems on the p-h chart

Example1 :

For a simple refrigeration cycle represented by p – h chart below if

$h_1 = 330 \text{ kJ/kg}$ $h_2 = 355 \text{ kJ/kg}$ And $h_3 = 225 \text{ kJ/kg}$

Calculate the following:

1. Refrigeration Effect (R.E)
2. Work Done (W.D)
3. Coefficient of Performance (C.O.P)

Solution:

$$R.E = h_1 - h_4 \quad R.E = \boxed{} - \boxed{} = \boxed{} \text{ kJ/kg}$$

$$W.D = h_2 - h_1 \quad W.D = \boxed{} - \boxed{} = \boxed{} \text{ kJ/kg}$$

$$C.O.P = RE / WD \quad C.O.P = \boxed{} / \boxed{} = \boxed{}$$
