Vamos dividir!

D U

$$\begin{array}{r} 24 \overline{) 4} \\ \underline{} \\ \end{array}$$

The diagram illustrates a division problem. The dividend is 4, and the divisor is 24. A yellow L-shaped bracket is drawn under the 4, with a red 'x' at its end, indicating that 24 does not divide 4. Below the division line, there are two empty boxes for the quotient. A yellow curved arrow points from the 4 to the first empty box, and another yellow curved arrow points from the 4 to the second empty box, suggesting the process of dividing the 4 by 24.

$$\begin{array}{r} \text{D} \quad \text{U} \\ - 35 \overline{) 5} \quad \times \\ \hline \square \quad \square \quad \square \\ \hline \square \quad \square \end{array}$$

A yellow bracket is drawn under the '5' in the dividend, and a red 'x' is placed to its right. A yellow curved arrow points from the '5' in the dividend to the '5' in the divisor.
