

**SJKT DESA CEMERLANG**  
**EXERCISE DURING MCO**  
**ENGLISH YEAR 5**

Four weeks later, skin grows over the gills until the gills finally disappear. The tadpole will get tiny teeth. These will help it to cut its food into small pieces.

About six to nine weeks later, little legs will start to grow on the tadpole. The head becomes bigger and the body becomes longer. Now, the tadpole will start eating dead insects and plants. At nine weeks, the tadpole looks like a small frog with a long tail.

By 12 weeks, the tadpole only has a small tail. It looks more like a frog. The frog will be fully grown between 12 to 16 weeks.

Write Yes or No.

a) Six weeks later, skin grows over the gills.

b) The head becomes bigger in six to nine weeks.

c) By 12 weeks, the tadpole only has a small tail.

d) The tadpole looks like a small frog in 14 weeks.

d) The frog will be fully grown between 12-16 weeks.
