

Characteristics of Ionic Bond or Ionic Compounds:

Compounds made of ions.

	<u>Ionic Bonds</u>
Formed By	Transfer of electrons (gain or lost) Positive or Negative Charges
Element	Metal + Nonmetal
Other Info	<ul style="list-style-type: none">- Metals lose electrons - Cations- Nonmetals gains the electrons -Anion- Atoms are held together by the attraction of opposite charges- Opposite charges attract
Melting & Boiling Points	HIGH
Conductivity	GOOD
Phase at Room Temp.	Solid
