Vocabulary Ex. – Finding Spelling Mistakes

Read the following paragraphs carefully. Find 12 spelling mistakes in each. Then write the correct spelling of each word in one of the boxes below.

Vertical Gardening

Who doesn't love the idea of having a beatiful garden without haveing to till and do other backbreacking garden work? In fact, this is one off the main reasons homeowners across the world are turning to vertical gardening for a new way to enjoy gardening whit a lot less work (but more on that latter). Some people may thing that vertical gardens can only be used for vine plants, but this isn't true. You can grow everything from tomatos and onions to espinach and mustard greens. Perennial and anual flowers can also be planted in this style. You can get creative with your vertical garden, making it aut of just about any materials you can find around your property at local home improvment store. *(Extract taken and adapted from Corson-Knowles, T. (2012) The Vertical Gardening Guidebook. US.)*

CHINESE COOKING TECHNIQUES

Throgh the centuries, Chinese cooking has also been adaptted to an ever-present shortage of fuel. Beacuse wood and other fuels for cooking have always been escarce, the Chinese have learned to spend a maximum amount of time on food preparation and a minimum amount of time on actual cooking. Most ingredients are diced, sliced, or shredded since smal pieces cook more quikly than large pieces. The seasonings are measured out ahead of time. Most cooking is done in one pot and usualy takes only a few minutes. One quick-cooking technique is the stir-fry metod in which meats, fishs, or vegetables are cut into small pices and tossed rapidly in hot oil. This method was developped to insure that the nutritional value, flavor, and color of foods where not lost during cooking. Steaming food is another fast method of cooking that preserves flavor and food value. *(Extract taken and adapted from Ling, Y. (2002) Cooking The Chinese Way. Lerner Publications Company. US.)*
