## Machine Learning Models

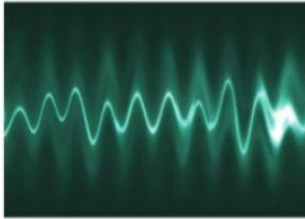

Ibrahim and Fatima are organising types of data.

Help them to decide whether the data below represents:

<p>signal.</p> <p>ary code with which the present is may take various forms, all of a property that the symbol (or representing each number (or sign) differs from the ones representing and the next higher number (or sign) in only one digit (or pulse). Because this code in its primary form is built up from the conventional a sort of reflection process and forms may in turn be built up in form in similar fashion, the code, which has as yet no recognized name, is called in this specification and the "reflected binary code."</p> <p>a receiver station, reflected binary</p>
