The Planet Earth

The Earth is a planet; that is, an almost spherical ball of rock, soil and water, surrounded by an envelope of gases. We already know a great **(30)**_____ about the Earth, because it is the place where we live.

The shape of the Earth is more correctly called a spheroid which is a complicated way of saying that the planet is slightly flattened at the north and south poles. This modification of the spherical shape **(31)**_____ as a result of the Earth's rotation around an axis through the poles.

When you look at the ground beneath your feet or **(32)**_____ hold of a piece of rock in a quarry it is hard to imagine that the shape of the whole Earth can change. The Earth seems to us to be very solid because we are so tiny by comparison. But the forces **(33)**_____ up within the planet are more than a match for the strength of the rocks. It is upon this base that the whole **(34)**_____ of familiar and not so familiar life forms has developed, from the tiny single-celled amoeba up to the most advanced life form – man. The Earth supports life in a multitude of forms, organized into communities.

The planet **(35)**_____ us with everything we need to live. Perhaps you have heard the expression "spaceship Earth". If you were isolated in a tiny spaceship for the rest of your life it would be very important to make the best **(36)**_____ of all your resources and not to foul the compartment with your waste. This is also true of the Earth.
