Konversikan satuan kecepatan

1. Ubahlah satuan jarak ataupun satuan waktu menjadi sesuai dengan yang dibutuhkan

contoh :

$$1. \quad 8 \frac{\text{km}}{\text{jam}} = \frac{10 \text{ m}}{1 \text{ jam}} = \frac{8000 \text{ m}}{1 \text{ jam}} = 8000 \frac{\text{m}}{\text{jam}}$$

$$2. \quad 36 \frac{\text{m}}{\text{jam}} = \frac{36 \text{ m}}{1 \text{ jam}} = \frac{3600 \text{ cm}}{60 \text{ menit}} = 60 \frac{\text{cm}}{\text{menit}}$$

Konversikan satuan kecepatan dibawah ini sesuai dengan contoh !

$$1. \quad 20 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{m}}{\text{jam}} = \frac{\text{m}}{\text{jam}}$$

$$2. \quad 240 \frac{\text{m}}{\text{menit}} = \frac{\text{m}}{\text{menit}} = \frac{\text{m}}{\text{detik}} = \frac{\text{m}}{\text{detik}}$$

$$3. \quad 360 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{menit}} = \frac{\text{km}}{\text{menit}}$$

$$4. \quad 216 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{m}}{\text{detik}} = \frac{\text{m}}{\text{detik}}$$

$$5. \quad 7000 \frac{\text{m}}{\text{menit}} = \frac{\text{m}}{\text{menit}} = \frac{\text{km}}{\text{menit}} = \frac{\text{km}}{\text{menit}}$$

$$6. \quad 18000 \frac{\text{cm}}{\text{menit}} = \frac{\text{cm}}{\text{menit}} = \frac{\text{m}}{\text{detik}} = \frac{\text{m}}{\text{detik}}$$

$$7. \quad 36 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{m}}{\text{detik}} = \frac{\text{m}}{\text{detik}}$$

$$8. \quad 4,8 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{m}}{\text{menit}} = \frac{\text{m}}{\text{menit}}$$

$$9. \quad 3,6 \frac{\text{km}}{\text{jam}} = \frac{\text{km}}{\text{jam}} = \frac{\text{m}}{\text{detik}} = \frac{\text{m}}{\text{detik}}$$

$$10. \quad 1 \frac{\text{m}}{\text{menit}} = \frac{\text{m}}{\text{menit}} = \frac{\text{cm}}{\text{jam}} = \frac{\text{cm}}{\text{jam}}$$
