

## Year 8 Measurement – Area of trapeziums

Calculate the area of the trapeziums below. Show all working out clearly.

I have provided an example for you to refer to.

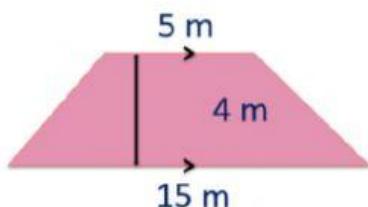

### Worked example:

### Working out:

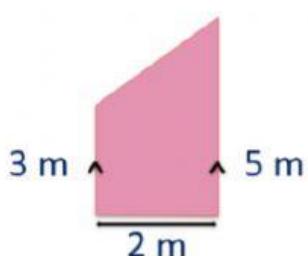

$$\begin{aligned}
 \text{Area of trapezium} &= (a + b) \div 2 \times \text{height} \\
 &= (2 + 6) \div 2 \times 5 \\
 &= 8 \div 2 \times 5 \\
 &= 4 \times 5 \\
 &= 20 \text{ cm}^2
 \end{aligned}$$

**Now, show me your understanding...**

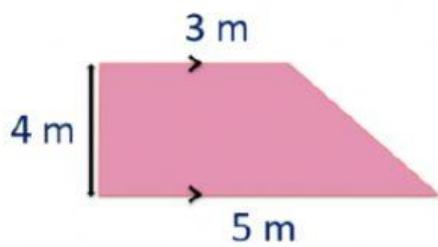

### Working out:

$$\begin{aligned}\text{Area of trapezium} &= (a + b) \div 2 \times \text{height} \\ &= \\ &= \\ &= \\ &= \end{aligned}$$

## Working out:

$$\begin{aligned}\text{Area of trapezium} &= (a + b) \div 2 \times \text{height} \\ &= \\ &= \\ &= \\ &= \\ &= \end{aligned}$$

Working out:

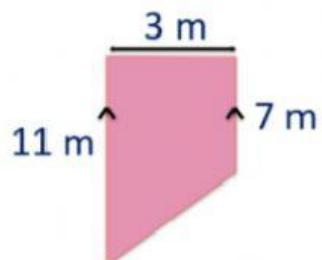

$$\text{Area of trapezium} = (a + b) \div 2 \times \text{height}$$

=

=

=

=

Working out:

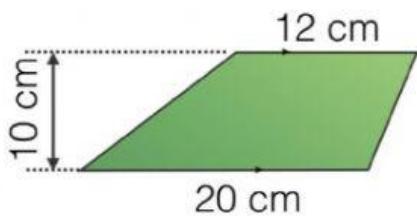

$$\text{Area of trapezium} = (a + b) \div 2 \times \text{height}$$

=

=

=

=

Working out:

$$\text{Area of trapezium} = (a + b) \div 2 \times \text{height}$$
