## Classification

Read the passage below. Follow the instructions to complete the two tables below.

Animals with backbones are called vertebrates. There are five groups of vertebrates: mammals, birds, fish, reptiles and amphibians. cats and whales are mammals. Chickens and ducks are birds. Groupers and snappers are fish. Snakes and turtles are reptiles. Frogs and toads are amphibians. Some vertebrates like mammals and birds are warm-blooded. Other vertebrates like fish, reptiles and amphibians are cold-blooded. There may be different types of vertebrates, but they all have backbones.
