

# Variables

## Activity 6

Complete the table below:

Data assignment	List of variables	Data stored in the variables
number = 2048	number	2048
score = 2.718		
yearBorn = 2007		
thisYear = 2021		
age = thisYear - yearBorn		

Use programming software to set and check the variables in the table below.

You need to set a variable name and use = to assign the value. Use the **print()** function to check the value.

problem description	assignment statement	value stored in the variable
1. A car weighs 3400 kg. How would you store the weight in a variable?		
2. Mansour had three lives at the start of a game. He has just lost one life.		
3. Store the total number of Grade 9 students in a school. There are 43.
