My skeletal system: Joints

Let's practice!

1. Your shoulder joint is an example of...
 - A. Inch joint
 - B. A saddle joint
 - C. Ball and socket joint
2. Name the joint that allow bones to move against each other, like a door hinge.
 - A. Pivot Joint
 - B. Cartilage
 - C. hinge Joint
3. Give two examples of this type of joint:
 - A. Tendons and Patella
 - B. Ligaments and Femur
 - C. Knee and Elbow
4. Name the joint that allow bones to move in a circle.
 - A) Bone and socket joint
 - b) Inch Joint
 - c) Pivot Joint
5. Give two examples of this type of joint.
 - a) Neck and ribs
 - b) Toe and arm
 - c) Shoulder and wrist
6. Name the joint that allows bone to move from side to side.
 - a) Ball and socket joint
 - b) Pivot joint
 - c) Hinge joint
7. Give an example of this type of bone.
 - a) Neck
 - b) Arm
 - c) Ankle
8. Name the joint that allows bones to glide over each other.
 - a) Pivot joint
 - b) Saddle joint
 - c) Plane
9. What is the name of the joint that does not move?
 - a) Hinge joint
 - b) Suture joint
 - c) Pivot joint
