

Showing the Reciprocal of Fraction

Name: _____

Date: _____
Teacher: _____

What fraction shall be multiply to the given value so that it's product will be 1

Example: $\frac{3}{4} \times \frac{4}{3} = 1$

1) $\frac{5}{8} =$

2) $\frac{6}{9} =$

3) $\frac{10}{12} =$

4) $\frac{8}{12} =$

5) $\frac{2}{9} =$

6) $\frac{7}{8} =$

7) $\frac{15}{20} =$

8) $\frac{10}{25} =$

Give the reciprocal of the given fraction below

Example: $\frac{1}{4} \cdot \frac{4}{1} =$

1) $\frac{6}{8} =$

2) $\frac{7}{2} =$

3) $33\frac{4}{5} =$

4) $41 =$

5) $54\frac{1}{5} =$

6) $\frac{2}{7} =$

7) $\frac{1}{8} =$

8) $\frac{4}{5} =$

9) $\frac{5}{6} =$

10) $\frac{1}{5} =$

Make the statement true. Use the number given inside the rectangle that will give a product of 1. Number can be repeated

1) $\boxed{12} \quad 1$

$\frac{12}{1} \times \frac{1}{12} = 1$

2) $\boxed{1} \quad 6$

$1 \times \frac{6}{6} = 1$

3) $\boxed{2} \quad 1$

$2 \times \frac{1}{2} = 1$

4) $\boxed{17} \quad 1$

$\frac{17}{1} \times \frac{1}{17} = 1$

5) $\boxed{1} \quad 43$

$43 \times \frac{1}{43} = 1$

Example: $\boxed{3} \quad 1$

$\frac{1}{3} \times \frac{3}{1} = 1$
