Name: _____

Animal Adaptation

Instinct and Learned behavior

The change in activity of an organism in response to a stimulus is called as behavior.

- An instinct is a part of the behavior of an animal. It is inherited (innate), not learned. However, the term does not include the action of sense organs.
- On the other hand, learned behavior is an **action that the person learns through observation, education or experience**.

Place each behavior under the correct heading by dragging and dropping.

zebras staying in herds

squirrel hiding nuts

birds migrate

dolphin doing tricks

dogs playing fetch

dog shaking after getting wet

cooking

bear cub watching mom hunt

birds migrate

playing an instrument
