

## CLOZE PASSAGE

### The Honey Bee

The honey bee is a very unusual kind of 1. \_\_\_\_\_. Unlike other insect; which live alone, the honey bee lives as a 2. \_\_\_\_\_ of a community. The bees live 3. \_\_\_\_\_ in what is known as a bee colony.

The head of the colony is called the 4. \_\_\_\_\_ bee. She is larger than the rest of the bees. Her main task in the 5. \_\_\_\_\_ is to lay eggs. Most of the other bees are the worker bees. These bees 6. \_\_\_\_\_ nectar and pollen from the flowers. The nectar that is carried by the 7. \_\_\_\_\_ bees is deposited on the hive and then converted into honey. The worker bees also help look after the young bees. As soon as the 8. \_\_\_\_\_ hatch, the worker bees feed the young bees with pollen and nectar. The 9. \_\_\_\_\_ type of bee found in the colony is the drone or male bee. The main task of such bee is to mate with new queen.

The queen bee has a life span of about three years. During this period, she would have laid more than half a 10. \_\_\_\_\_ eggs. When the queen bee is dying, a new queen would be groomed. This new queen would eventually take over the 'duties' of the old queen when the latter dies.
