26. A. although B. because C. due to D. in spite of
27. A. as if B. either C. neither D. whether

Read the following passage and mark the letter A, B, C or D to indicate the correct answer to each of the questions.

Mercury is the smallest member of the sun's family. It is only 3.100 miles across. It is also the sun's swiftest planet. Its yearly journey round the sun is only 85 days.

Mercury always keeps one side towards the sun. On this side it is always day, on the other side always night. We only see the lighted side.

Mercury appears to us like a yellowish orange star. The nearest planet to the sun, it is always seen near the sun, either just before sunrise or soon after sunset. People sometimes call mercury the morning star or evening star. Mercury is half the size of the earth. Because it is much lighter, it has much less gravity. If you

can visit Mercury in a spaceship, you will find it a strange world. Its low gravity makes you feel very light. If your weight on earth is 100 pounds, your weight on Mercury is only 27 pounds. Looking at the sun from Mercury, you can see that it's much more brilliant than it is seen from the earth. And the yellow centre of the sun appears three times bigger from Mercury. On its lighted side, Mercury's temperature is about 300 degrees centigrade. But the dark side is extremely cold, but 150 degrees below zero so mercury is probably the coldest as well as the hottest of the planets.

28. The word "**swiftest**" in paragraph 1 is closest in meaning to _____.

A. fastest B. coldest C. hottest D. biggest

29. We cannot see the dark side of Mercury because _____.

A. it moves very fast
B. it always appears just before sunrise or soon after sunset
C. it always keeps one side towards the sun
D. it is too far for us to see

30. When can we see Mercury? - We can see it _____.

A. just before the sunset B. just before sunrise
C. after the sunset D. both A and C are correct

31. Why do we weigh much on the earth than on Mercury? - Because _____.

A. Mercury is nearer to the sun B. Mercury has got less gravity than the earth
C. Mercury is much hotter D. none are correct.

32. Why does the sun look bigger when it is seen from Mercury? - Because _____.

A. Mercury is the smallest planet of the sun
B. Mercury is nearer to the sun
C. Mercury is a light planet
D. It only takes Mercury 88 days to move round the sun.

Mark letter A, B, C or D on your answer sheet to indicate the sentence that is closest in meaning to the original sentence in each of the following questions.
