

Complete the concept map about the digestive system:

Complete the picture with the parts of the digestive system:

Complete the text about the digestive system:

The digestive system _____ food, _____ nutrients and _____ undigested food.

Digestion takes place in the digestive system. This is how it works:

1. The teeth crush the food and mix it with saliva in the _____.
2. The food travels down the _____ to the stomach.
3. The food mixes with _____ in the _____.
4. The _____ produces a liquid called _____ that helps break down food.
5. In the _____, the food mixes with bile and nutrients are absorbed and pass into the blood.
6. The undigested food is transformed into faeces in the _____.
7. The faeces pass through the _____ and leave the body through the _____.

Match the parts of the digestive system to their functions:

- | | |
|--------------------|---|
| 1. Mouth | A. It produces bile, which helps break down food. |
| 2. Esophagus | B. Here gastric juices begin to break the food down. |
| 3. Stomach | C. Here the food is crushed and mixed with saliva. |
| 4. Liver | D. Here the faeces are formed from the remains of the food. |
| 5. Small intestine | E. Here the nutrients are absorbed and pass into the blood. |
| 6. Large intestine | F. The faeces pass through this part before leaving the body. |
| 7. Rectum | G. Here food travels down to the stomach. |

Order the stages of digestion:

- __ The food is mixed with gastric juices in the stomach.
- __ The faeces are expelled through the rectum.
- __ In the mouth, the teeth crush the food and it is mixed with saliva.
- __ In the small intestine, the food mixes with bile from the liver and the nutrients and vitamins are absorbed.
- __ The food passes down the esophagus and into the stomach.
- __ The remains of the food are transformed into faeces in the large intestine.
