Did you know that meat can be grown in a laboratory? Well, that's **1**_____ **(PRECISE)** what some Dutch scientists have managed to do! Their goal is to **2**_____ **(ARTIFICIAL)** create a hamburger in order to reduce the need for farming. Meat produced the **3**_____ **(TRADITION)** way on farms has a massive impact on the planet. In fact, it is thought that livestock is responsible for 18% of greenhouse gas **4**_____ **(EMIT);** a bigger share than transport!

Many experts believe that farming is no longer **5**_____ **(SUSTAIN),** which is why they have turned to lab-grown meat as a(n) **6**_____ **(EFFECT)** solution to the problem. Not only does it eliminate the need for farmland, but it is also **7**_____ **(ENVIRONMENT)** friendly! However, what will a synthetically grown hamburger taste like? Well, it will probably taste quite bland at first; but scientists are **8**_____ **(OPTIMIST)** that the flavour can be improved at a later stage. They even plan to ask a(n) **9**_____ **(FAME)** celebrity chef to cook their burger, who will **10**_____ **(HOPE)** transform it into a mouth-watering delight!

So, what do you think? Are you tempted by a test-tube hamburger, or do you find the thought of it rather **11**_____ **(APPEAL)?**
