ENGLISH TRANSLATION AND WRITE DOWN:

Coral polyps Over millions of years of joint evolution, the community of these organisms has gone so far that neither polyps nor algae can exist without each other. Therefore, living corals can only be found at depths of no more than … , where the algae receive a sufficient amount of sunlight. Despite the seeming indestructibility of coral reefs, the coral polyps that create them are extremely gentle and capricious creatures. They feel good only in crystal clear water of rather high salinity, the temperature of which rarely drops below … ° C. Therefore, coral reefs are distributed mainly in the tropical regions of the World Ocean, moving to subtropical and even temperate latitudes only following warm sea currents. But even in the tropics, corals are absent in the mouths of large rivers that desalinate sea water and pollute it with … and … .
