Nombre: *Curso:*

Realiza las siguientes operaciones simplificando al máximo el resultado. En la fracción irreducible indica el signo, aunque sea positivo.

$$\frac{2}{5} \cdot \frac{6}{4} = \quad — \quad = \quad —$$

$$\frac{3}{4} : \frac{9}{12} = \quad — \quad =$$

$$\frac{3}{5} : \frac{(-6)}{15} = \quad — \quad = \quad —$$

$$\frac{9}{(-2)} \cdot \frac{4}{(-15)} = \quad — \quad = \quad —$$

$$\frac{(-1)}{6} \cdot \left(-\frac{4}{7}\right) = \quad — \quad = \quad —$$

$$\frac{15}{3} : \left(\frac{-3}{5}\right) = \quad — \quad = \quad —$$

$$\frac{(-7)}{4} \cdot \frac{(-2)}{7} = \quad — \quad = \quad —$$

$$\frac{-5}{14} : \frac{5}{-2} = \quad — \quad = \quad —$$

$$\frac{2}{3} : \left(-\frac{4}{5}\right) = \quad — \quad = \quad —$$

$$\frac{-4}{-3} \cdot \frac{5}{6} = \quad — \quad = \quad —$$

$$\left(\frac{-6}{5}\right) \cdot \left(\frac{5}{-2}\right) = \quad — \quad =$$

$$\frac{-5}{-1} : \frac{15}{-3} = \quad — \quad =$$

$$\frac{7}{3} : \frac{-14}{9} = \quad — \quad = \quad —$$

$$\frac{-1}{4} \cdot \left(-\frac{8}{5}\right) = \quad — \quad = \quad —$$

$$\frac{12}{5} : \frac{10}{3} = \quad — \quad = \quad —$$

$$\frac{(-10)}{6} \cdot \left(-\frac{3}{5}\right) = \quad — \quad =$$

$$\frac{-11}{4} \cdot \frac{-1}{22} = \quad — \quad = \quad —$$

$$\frac{8}{-6} : \frac{16}{6} = \quad — \quad = \quad —$$
