stone	life	footprints	mold	carbon
fossils	bones	cast	amber	info

- When life leaves us, when they die
_____ may form in their site
Gives us _____, how they lived, oh
Some easy identified
Like our plants, animals that's why
They help us tell, how _____ was then
- When evidence is in the floor
Fossils deep from life before
We dig them out, we dig them out
Fossil records we study
The kinds of things once living
They help us tell, how life was then
- We can work out how they lived
Learn about all life ancient
- And how they're forming
Fossils, fossils
Animals die-leave their _____
The sediments then turn to _____
Fossils, fossils
Skelton gone now a _____
The minerals fill- _____ is formed
Found years after they're gone, gone, gone
- Fossils form like a statue
Not all lucky to capture
They may rot away, after decay
Right conditions may bury
Fossilize it's preserving
Record of the past, a mold and cast
- The remains of once living
And sometimes from ones extinct

- Mold of a bone
Footprints or burrows
Insects caught in _____ not moving
Petrified rock
Replaced organ parts
_____ stays making carbonization
_____ found maybe how feet beating
How they walked maybe two or four limbs
Did they herd? Maybe they stampeded
Found in mines, quarries, even riverbeds
- Fossils
Found years after they're gone, gone, gone
Fossils found years after they're gone, gone, gone
