Researchers and scientists around the world agree that our environment is in extreme danger. Global warming and the resultant climate change cause devastating floods and droughts in different parts of the world. Recently, the leaders of the world attended a meeting called COP 26 to discuss this issue. Scientists 1. \_\_\_\_\_ that we are emitting 43 billion tons of carbon dioxide a year. This is mainly from fossil fuels like coal, oil and gas that we use to produce energy. The leaders agreed to 2. \_\_\_\_\_ alternative sources of energy like solar power and wind power to 3. \_\_\_\_\_ fossil fuels. However, this would be difficult because many developing countries like China and India 4. \_\_\_\_\_ use coal as the main fuel to produce electricity. The leaders also agreed to 5. \_\_\_\_\_ the remaining forests and prevent further deforestation. Saving the forests will help many endangered animals and communities from imminent extinction. Many countries have set 2050 as the target year to achieve zero emissions.
