

Work in pairs. Look at the list of things a-g which scientists do to develop a new antibiotic drug. Put the stages in the order which you think they happen.

Scientists:

a		test the drug on people who have the illness.
b		test the new drug using a computer model.
c		test the drug on human cells in a laboratory.
d	1	find a new source for on antibiotic.
e		test the drug on animals.
f		stop testing if the drug damages the cells.
g		test the drug on healthy humans.
